Patents & Industry Experience

- 9 years leading industrial AI R&D at **OGQ** as **Principal AI Researcher** (2017–present)
- 13 Korean patents (7 granted, 6 filed), including one filed by the **Seoul National University R&DB Foundation** (2026)

Biography

My research focuses on reducing annotation and optimization burdens in visual learning through generative priors and lightweight interaction mechanisms. By leveraging the implicit knowledge embedded in large-scale foundation models, I explore data-efficient and training-free approaches to overcome the limitations of resource-intensive pipelines. This methodology drives my work across diverse applications, spanning weakly-supervised segmentation, multimodal alignment, and controllable generation.

I have been with **OGQ** since 2017, currently serving as the **Principal AI Researcher** and leading industrial AI research and development to maximize tangible real-world impact. In parallel, I have been pursuing my research under the official advisement of **Prof. Kyungsu Kim** since 2021. Following his appointment at Seoul National University, I joined the **SNU AIBL Lab** as an **Affiliated Researcher**. In this role, I mentor graduate and undergraduate researchers and lead core projects, including recent works where I serve as a co-corresponding author. Integrating industrial R&D leadership with academic rigor, I aim to develop machine learning systems that are both scientifically grounded and practically deployable.
